SUMMARY

Solutions Engineer with 3+ years in infrastructure. Combines hands-on backend engineering — microservices architecture, REST/WebSocket APIs, message queues, low-latency systems — with partner-facing technical ownership across integration design, due diligence, and production deployment. Built and scaled a DEX backend from testnet to production at Chaidex; owned the full integration lifecycle for 10+ partner teams at Sei (600% developer engagement growth); and shipped SDK contributions, demo applications, and integration flows at =nil; Foundation. Proficient in TypeScript, Python, and Solidity with working knowledge of Rust and Go. Deep domain expertise in EVM infrastructure, cross-chain protocols, wallet systems, and DeFi tooling. Builds the reference implementations, documentation, and internal tooling that make complex integrations frictionless at scale.

SKILLS

Languages: TypeScript, JavaScript, Solidity, Python, Rust, Go

Blockchain: EVM Smart Contracts, Cross-Chain Messaging (Hyperlane, LayerZero, Wormhole), Rollup Architectures (Optimism, Arbitrum Orbit), Wallet Infrastructure (Privy, Turnkey), Account Abstraction (ERC-4337, EIP-7702), DeFi Protocols, Oracles

Tooling: Hardhat, Foundry, Ethers.js, Wagmi, GitHub, Docker, GCP, AWS, BullMQ/Redis

Solutions: Integration Architecture, Technical Due Diligence, Smart Contract Auditing, Developer Documentation, SDK/API Improvement, B2B Partner Onboarding

EXPERIENCE

Solutions Engineer & Developer Relations

Jun 2025 – Present

Sei Development Foundation

- Primary technical POC for 10+ ecosystem teams — owned integrations end-to-end from architecture design through smart contract audits, debugging, and go-live
- Led technical due diligence for multiple mainnet projects including time-sensitive TGE launches and cross-chain bridging support (LayerZero OFT, Wormhole NTT)
- Built an open-source reference implementation library with production-tested EVM integration patterns and TypeScript/Solidity tooling — adopted by ecosystem teams as the standard onboarding resource, reducing average integration time and repeat support questions
- Researched and implemented wallet infrastructure workflows (Privy, Turnkey, Particle Network) and account abstraction (ERC-4337, EIP-7702)
- Curated awesome-sei ecosystem directory, contributing to **600% increase in developer engagement** (Electric Capital)
- Built internal automation (Monday.com → GitHub PR pipeline, TypeScript, BullMQ, Redis) to streamline ecosystem operations
- Revamped developer documentation using 30:30 framework; conducted smart contract security reviews and architecture consultations for ecosystem projects
- Acted as bridge between builders and engineering/product — triaging bugs, channeling feature requests, following through to resolution

Developer Relations Engineer

Apr 2024 – Jun 2025

=nil; Foundation

- Managed end-to-end developer onboarding for devnet/testnet cohorts; ran 1-on-1 technical calls, scoped integration requirements, shipped feedback to product
- Worked directly with external teams to complete integrations with =nil;'s zkSharding architecture — owned technical relationship through deployment
- Contributed to SDKs and client libraries; built demo apps; tested integration flows for edge cases and performance
- Led outreach campaigns (Twitter Spaces, community events, workshops) driving platform awareness and developer pipeline

Lead Backend Engineer

Sep 2022 – Apr 2024

Chaidex

- Architected the entire microservices backend for a decentralized exchange — fault-tolerant systems across REST APIs, WebSocket feeds, message queues, and low-latency order routing
- Developed core exchange smart contracts: liquidity pool mechanics, swap logic, and transaction batching — from testnet prototype to production-ready infrastructure
- Implemented oracle price feeds, event-based indexers, and real-time data pipelines; built hedging strategy execution layer with latency-optimized order matching
- Scaled the full backend stack: API gateway, WebSocket event distribution, database indexing, and monitoring/alerting for production reliability

EDUCATION

BE in Electronics and Telecommunication Engineering

May 2024

Dayananda Sagar College of Engineering | SGPA: 9.03/10 | 6th Rank in University
